Solidcore – Santana Row

A high-performance Pilates studio combining branded interiors, accessible member amenities, and specialized acoustic construction within the vibrant Santana Row community.

Solidcore – Santana Row is a 2,211-square-foot tenant improvement project delivering a new Pilates and strength-training studio within an existing retail space in San Jose. Build Group completed the full interior build-out, transforming the previously unfinished suite into a functional, welcoming health and wellness environment tailored to Solidcore's specialized fitness program.

The project included architectural, mechanical, electrical, and plumbing improvements throughout the space. Underground plumbing modifications supported the construction of new ADA-accessible restrooms and locker rooms, while custom millwork and finish installations established the studio's distinct brand experience across the lobby and member areas.

A key feature of the build-out was the installation of an acoustically isolated double-ceiling assembly. Designed to reduce sound and vibration transfer to neighboring tenants, the system supports high-intensity classes while maintaining compatibility with the surrounding mixed-use environment at Santana Row.

The completed studio offers members a polished, accessible, and acoustically controlled fitness environment within one of San Jose's most active retail destinations.
